SUMMARY

DevOps/SRE Engineer with 3+ years of experience designing and operating production-grade cloud infrastructure on AWS and Azure. Proven track record of reducing release cycles by 30% and cutting incident response time by 40% through end-to-end CI/CD automation (Jenkins, GitHub Actions, Azure DevOps), container orchestration (Docker/Kubernetes/EKS/AKS), and full-stack observability (Prometheus/Grafana/Datadog). Hands-on expertise in Infrastructure as Code (Terraform), configuration management (Ansible), and DevSecOps practices (SonarQube, Trivy, OWASP). Passionate about building resilient, zero-downtime systems with strong SLO/SLA ownership that enable fast, safe software delivery at scale across multi-cloud environments.

SKILLS

Cloud Platforms: AWS (EC2, S3, VPC, IAM, RDS, ELB, ASG, SNS, CloudWatch, EKS, CodePipeline); Microsoft Azure (AKS, Azure DevOps)

CI/CD Tools: Jenkins, GitHub Actions, AWS CodePipeline, Azure DevOps Pipelines, Git-based pipeline automation

Containers & Orchestration: Docker, Kubernetes (EKS, AKS, Pods, Deployments, HPA, Services, Ingress, ReplicaSets), Helm

Infrastructure as Code: Terraform, AWS CloudFormation

Configuration Management: Ansible

Monitoring & Observability: Prometheus, Grafana, Datadog, AWS CloudWatch

DevSecOps / Security: SonarQube, Trivy, OWASP Dependency Check, SAST, Container Security

Scripting: Bash, Python (boto3, automation scripts)

Source Control: Git, GitHub, BitBucket — GitFlow branching strategy

Build Tools: Maven

Databases: AWS RDS (MySQL)

Methodologies: Agile/Scrum, SLO/SLA ownership, Toil Reduction, SDLC, Waterfall

PROFESSIONAL EXPERIENCE

DevOps Engineer | Dedalus | Hybrid

2023 – Present

- Architected and automated end-to-end CI/CD pipelines using Jenkins, Git, and Maven — reducing release cycle time by 30% and increasing deployment frequency across dev, staging, and production environments.
- Designed and provisioned scalable AWS infrastructure using Terraform (IaC), enabling consistent, version-controlled resource management and eliminating environment drift across all SDLC stages.
- Led full containerization initiative using Docker, standardizing environment setups across SDLC stages; eliminated environment inconsistencies and accelerated developer onboarding.
- Deployed and operated Kubernetes (EKS) clusters for microservices architecture, implementing ReplicaSets, Horizontal Pod Autoscaling (HPA), and load balancing to ensure 99.9% high availability and fault tolerance.
- Deployed and managed containerized workloads on Azure Kubernetes Service (AKS), extending the team's orchestration capability beyond AWS EKS to support multi-cloud microservices delivery.
- Built and maintained CI/CD release pipelines in Azure DevOps, aligning build, test, and deployment stages with existing Jenkins-based workflows for consistent delivery across cloud platforms.
- Engineered blue-green and canary deployment strategies on Kubernetes/EKS, achieving zero-downtime releases for critical application upgrades and feature rollouts.
- Built comprehensive observability stack with Prometheus and Grafana — designed custom dashboards and alert rules, reducing Mean Time to Detect (MTTD) by 40% and proactively optimizing cluster resource usage.

- Integrated DevSecOps practices into CI/CD pipelines using SonarQube, Trivy, and OWASP vulnerability scanning, enforcing security gates at every code commit and container build stage; reduced critical vulnerabilities by ~35%.
- Defined and enforced GitFlow branching strategies across multi-team development workflows, streamlining code integration, peer reviews, and release coordination.
- Managed core AWS services — EC2, S3, VPC, IAM, RDS, ELB, ASG, SNS, CloudWatch — to maintain a secure, highly available, and cost-optimized cloud infrastructure.
- Automated server configuration and application deployment using Ansible playbooks, reducing manual operational toil by ~50% and ensuring configuration consistency across instance fleets.
- Defined and tracked SLOs/SLAs for production services, used error budgets to balance reliability with deployment velocity, and drove toil-reduction initiatives to improve platform engineering efficiency.

EDUCATION

Bachelor of Engineering — Computer Science | Saveetha School of Engineering | Chennai, India

2019 – 2023

CERTIFICATES

- AWS Certified — DevOps Engineer / Solutions Architect (Amazon Web Services)
- DevOps Certification — Dedalus (Internal), 2023

ACHIEVEMENTS

- Reduced production incident response time by 40% through Prometheus/Grafana observability stack with custom alerting rules.
- Delivered 30% faster release cycles by implementing end-to-end CI/CD automation with Jenkins and GitHub Actions.
- Eliminated environment drift across all SDLC stages through Terraform-based IaC, improving deployment consistency.
- Reduced manual operational toil by ~50% through Ansible automation across instance fleets.
- Extended platform delivery capability to a second cloud provider (Azure) via AKS and Azure DevOps, supporting multi-cloud deployment flexibility.
